

Migrations Plug-in

sponsored by: AppTracker

Installation Instructions

This plug-in introduces an application portfolio, where players will migrate play cards to score points.

Set aside the migrations deck; each release, after revealing a Tools & Methods card, reveal a new migrations card.

After scoring, each player must transfer one card from their artifacts to a separate face-down pile in front of them; this is their application portfolio. These cards remain in each player's application portfolio until the end of the game, and can never be removed, even at the end of a release. Immediately after scoring each release, score the migrations card; this is not considered to be part of the standard scoring step.

APP TRACKER

+2 for each 10 to 13 in your application portfolio
